Q: How to avoid writing multiple if else conditions using a single method I have to compare two object of different classes and write a method which compares the strings and if they are the same it

returns true else it should return false. Here is the code I have tried. `boolean compare(String s1,String s2) { if(s1.equalsIgnoreCase(s2)) { return true; } else { return false; } }` The output I want is :

```
compare("a","a"); compare("a","b"); compare("a","x");
compare("a","z"); compare("b","a"); compare("b","b");
compare("b","x"); compare("b","z"); compare("x","a");
compare("x","b"); compare("x","x"); compare("x","z");
compare("z","a"); compare("z","b"); compare("z","z");
```

But its giving the following output: How can I get the correct output? A: As others have mentioned, the classic answer is: `public static boolean compare(Object s1, Object s2) { if (s1 == s2) { return true; } else { return false; } }`
