Development frameworks AutoCAD itself is object-oriented, with a build-in scripting language called AutoLISP and two user-developed extensions, Visual LISP and Visual BASIC. AutoLISP and Visual LISP can be used to write add-on applications. AutoCAD also supports a number of other languages, mainly visual BASIC, Visual C++, Visual J# and Visual Basic.NET.

These are interpreted languages, and cannot be used to write an add-on that can interact with AutoCAD commands. AutoCAD 2011 supports Visual J#, Visual Basic.NET, Visual C++ and AutoLISP as the primary development languages, alongside Visual BASIC. AutoCAD 2017 supports Visual J# and Visual Basic.NET as the primary development languages, alongside Visual C++, AutoLISP, AutoLISP for Visual C++ and AutoLISP for AutoLISP. APIs and SDKs In addition to the standard API, AutoCAD also has a number of Application Programming Interfaces (APIs) for accessing its features. These are used to provide an application programming interface that is not part of AutoCAD itself, or to interact with AutoCAD from an external application. These APIs are mainly used for writing add-ons that use AutoCAD for specific purposes. They are usually located in the AutoCAD directory, such as "api\ac_ui_utility" (for user interface components). That is, the user should be able to drag some items of the list so that they change position. I don't mind if I need to force an empty section at the bottom of the list, but I have not found an example of this, so I'm a little lost on how to do it. A: You can use an ItemTouchHelper to do this. Documentation is here 5b5f913d15
