One Piece Pirate Warriors 2 Serial Key [Latest-2022]. Share Now. Ebp Gestion Commerciale Pro 2016 Crack.Q: Dynamic range search on multiple columns I need to search the dynamic range of a column in a userform. The user form has several textboxes that are used to search for different criteria. The dynamic range is a Table located in the same userform (named "TblPatient"). So I use this code in UserForm1.txtSearch: TblPatient.ListColumns(3).DataBodyRange.Formula1 = "=TblPatient.ListColumns(3).DataBodyRange.Value =" & Me.txtSearch.Value & "" This works fine. The thing I need is to use a multiple search, to add more criteria, in my case the user press the '+' or '-' button in the textbox named 'txtAddCriteria'. But on runtime the Range.Formula1 returns an error of #VALUE! and it doesn't work (the search doesn't work) I need to change the code to make it work for this. I've tried to change the formula1 by using this: TblPatient.ListColumns(3).DataBodyRange.Formula1 = "=TblPatient.ListColumns(3).DataBodyRange.Value*" & Me.txtSearch.Value & "*" and this: TblPatient.ListColumns(3).DataBodyRange.Formula1 = "=TblPatient.ListColumns(3).DataBodyRange.Value*" & Me.txtSearch.Value & "*" and this: TblPatient.ListColumns(3).DataBodyRange. 570a42141b
