Means Estimating Book Hept. Means estimating handbook is a book available as paper book, pdf book and epub book and you can read it online by clicking button below. Means estimating handbook is written by Paul R. Poper from Paramount Publishing, Inc. and created 13. September 2017. The book is available in pdf format from Book Depository from \$ 0.88 and free shipping!. Obesity is a public health epidemic that disproportionately affects Hispanic adults: Project 1 builds on the Massachusetts General Hospital (MGH) Hispanic Research Center's (HRC) successful long-term epidemiologic study of obesity in Puerto Rican men in New England. MGH HRC has also begun a randomized trial of a theory-based behavioral weight loss intervention conducted in primary care with Hispanic patients. The key to the success of a weight loss intervention in Hispanic individuals is that the intervention be culturally adapted for Hispanic patients. The Latino Health Research Consortium (LHCR) has identified methods to adapt evidence-based interventions for Hispanic patients with overweight or obesity. These methods are based on: 1) a fundamental research study of the culture-behavior link in the Hispanic population; 2) the successful cultural adaptation of other population-based interventions for Hispanics (the Navigation guide, the Diabetes Prevention Program, and the Heart of the Matter intervention); 3) the successful use of cultural competency methods by public health practitioners for Hispanics; 4) the theoretical underpinnings of the LHCR intervention; and 5) the successful use of qualitative methods to understand the experience of obesity among Hispanic individuals and parents of overweight children. We therefore propose to adapt the LHCR intervention by using qualitative methods to learn about and from Hispanics: an approach that draws on the strengths of both the qualitative and quantitative research literatures. PUBLIC HEALTH RELEVANCE: Project 1 of the Mayo Clinic Hispanic Research Center addresses obesity in Hispanic adults in Massachusetts. MGH HRC has adapted the Latino Health Research Consortium intervention to address obesity in Hispanic individuals. Project 1 will test the effectiveness and cost-effectiveness of the LHCR intervention for the prevention of obesity in Hispanic individuals. World Refugee Day commemorates mass migration in human history and a need to address it 10 June 2016 Share The UN High Commissioner for Refugees, Filippo Grandi, today commemorated World Refugee Day by recalling that some 65 million people have been forced from their homes due to war and violence since World War I, which is the equivalent of 2.2 refugees per head of population
