ModelRight Professional Free Download

The Free version of ModelRight is a powerful, yet simple tool to design databases without having to understand any database technology. ModelRight Professional is a professional tool for designers. It is a full featured relational database design program which allows you to create complex database models, generate database design documents, execute SQL DDL scripts, create reports, define constraints and compare your design with your existing database. ModelRight Professional supports multiple databases including SQL Server, Oracle, MySQL, DB2, PostgreSQL, ODBC. This version of ModelRight Professional has many new features including support for SQL Server. It includes a lot of new functionalities including: - Create new database (it allows you to generate DDL script) - Create new database (it allows you to generate DDL script) - Design database models, including complex models - Generate reports, create reports from XML source - Import data from files (including Flat files) - Test Database Model - Model right offers Database Compare, helping you compare the Database Model to the existing database. Features * Design database models, including complex models. * Generate reports, create reports from XML source. * Import data from files (including Flat files). * Test Database Model. * Export database models to *.sql files. * Export database models to database source code. * Import database models. * Export database models to XML (with XSLT). * Convert database models to database source code. * Compare database models to the existing database. * Generate SQL DDL based on changes. * Design database schemas, including complex database schemas. * Generate reports, create reports from XML source. * Import data from files (including Flat files). * Test database schema. * Create and test database views. * Import data from files (including Flat files). * Generate database scripts, including SQL DDL, SQL DDL, and database scripts. * Create database views. * Import data from files (including Flat files). * Compare database scripts to the existing database. * Export database views to files (including XSL files). * Import database views. * Export database views to XML (with XSLT). * Export database views to database source code. * Import database views. * Import database views from database source code. * Export database views to XML. * Convert database views to database source code. * Compare

What's New In?

===== ModelRight Professional is an application that is designed to allow you to design your own database easily. The application provides you with many features to assist you in doing that. Most of these features have been improved in version 1.1 as well. You can create a new database from a set of tables with the click of a button. There is no need to understand the inner working of databases if that is what you need. Database creation is achieved by using a simple wizard to answer the questions regarding the contents of your database. It can work with any database of your choice. There is no need to install and configure databases separately. It will help you to create new databases if needed. It will also allow you to work with more than one database at the same time. The application has simple and clean user interface, which makes it very easy to use. Database design You can design your database with ease. The application provides tools to help you enforce complex constraints, manage database views, validate design decisions, and create complete CREATE and ALTER scripts. You can easily see what the views are as there are tools that allow you to define your views. This is very useful if you want to create different views on the same or different databases. You can also view and alter objects and properties. This can be very useful if you want to change the database to reflect the changes you recently made to your Model. You can even change the Model's target database property. You can specify the visibility and all the required properties for objects and properties. ModelRight Professional supports multiple databases, this allows you to save your database designs with the original database and work with it later as well. The application generates reports by first generating XML data containing whatever model information you want. That XML is then transformed using XSL into whatever report format you like - HTML or RTF. You can define the report properties by using the XSL Stylesheet to get the report in whatever format you want. It can also create scripts to update and merge databases, you can also generate script files in SQL Server scripting syntax or other scripting languages if needed. You can also import and export all kinds of files including XML, RTF, HTML and CSV files. You can export to a database, create database and grant permissions. It also allows you to search your database and export all kinds of information. You can print your database if you want, you can also work on diagrams to visualize your database. You can also view reports in different formats if required. You can export your data to various other formats like XML, RTF, HTML and CSV. You can also import data from various formats. The application supports MySQL and SQL server database. Database design application that allows you to design your own database easily. The application provides you with many features to assist you in doing that. Most of these

System Requirements:

Minimum: OS: Windows 7 x86 or Windows 8/8.1 x86 CPU: Dual Core Memory: 2 GB RAM Graphics: DirectX 11 compatible graphics card with at least 2 GB VRAM DirectX: Version 11
