The price is \$169.95 for a single license. The upgrade price is \$99.95.Q: Proof of $\prod_n(1-\frac{1}{n})=e^{-1}$ by evaluating the infinite series I came across this formula in my book: $\prod_{n=2}^{\infty}(1-\frac{1}{n})=e^{-1}$ What I can't figure out is how to show this by evaluating a series, or doing some sort of manipulation. I've tried to do that by writing $\prod_{n=2}^{\infty}(1-\frac{1}{n}) = \lim_{N \rightarrow \infty} \prod_{n=2}^N(1-\frac{1}{n}) = \lim_{N \rightarrow \infty} \frac{1}{N} = 0$ But this doesn't seem to help. A: You have $\prod_{n=2}^{\infty}(1-\frac{1}{n}) = \frac{1}{2} \cdot \frac{2}{3} \cdot \frac{3}{4} \cdot \frac{4}{5} \cdot \frac{5}{6} \cdot \frac{6}{7} \cdot \frac{7}{8} \cdot \frac{8}{9} \cdot What's New in the Embarcadero Rapid SQL?

ELK RAINBOW is the leading Chinese retailer in the clothing industry. Over the past 5 years, ELK RAINBOW has developed into a highly efficient business system, serving over 3.5 million customers monthly. To capture more market share, ELK RAINBOW seeks to tap into a large, young consumer base by expanding its website. The company is based in Singapore, but many of its development teams work out of Shanghai. The people who develop ELK RAINBOW's website are less than twenty years old. The main objective of this project is to improve their productivity. To achieve this, we plan to replace their legacy database by a modern database and to provide them with a new design for the application. ELK RAINBOW's data model is fairly straightforward, following the single table inheritance approach. The database has numerous tables, including a tracking table, which has 3.5 billion rows and 25 columns. ELK RAINBOW has already started using Tableau, and this tool is used to explore the data, as well as present the data to the business users. In addition to the reporting tool, we are also working on an in-house mobile application. It will be an iPhone application that allows the users to interact with the ELK RAINBOW database directly from the device. This application will be written using Apple's iOS framework, which will provide users with a high level of security. ELK RAINBOW's application has been divided into 4 or 5 layers of applications: - A Database Management System (DBMS) layer: It contains all the objects of the database, as well as a tracking layer. - A Business Logic layer: It contains the application, the mobile layer, and the web front end. - The User Interface layer: It displays the data to the users and manages the web front end. - The Data Model layer: It contains the table structure, mainly represented by .ilf files.
